

is a random copolymer polypropylene material. It has good mechanical properties combined with outstanding chemical resistance and low density. Our material does not require a heated building chamber to be printed and it exhibits enhanced layer bonding, thus reducing the anisotropy of the final part.

A PP build plate is recommended for the neat material.

Product	Description	Technical Data Sheet
LUVOCOM 3F PP 9929 NT	Modified neat grade	<a href="#">Click here</a>
LUVOCOM 3F PP CF 9928 BK	Carbon fiber (CF) filled grade.	<a href="#">Click here</a>
